1 Introduction

1.1 Summary

1.2 Goals

1.3 Field of application

1.4 Prior Art

1.4.1 Computer vision in industrial applications

1.4.2 Magnetic gap measurement

1.4.3 Embedded computer vision

1.5 Fundamentals

1.5.1 Segmentation

1.5.2 Binarization

1.5.3 Camera calibration

1.6 Planification

2 Design

2.1 System specifications (according to the goals)

2.2 Hardware design

2.3 Custom communications protocol over CAN

2.4 Image processing. Matlab prototypes

2.5 Gap measure display

3 Implementation

3.1 Hardware constraints

3.2 Image processing library

3.3 Image sensor configuration

3.4 Communications protocol

4 Results

4.1 Accuracy and repeatability

4.2 Image vs magnetic sensor

4.3 On site measurements ₂

5 Conclusions

5.1 Goals review

5.2 Future work

6 Bibliography
